

DUST FILTERS

Combination
Dust Collector
and Cyclone

Industrial Air dust filters combine the simplicity of a cyclone with the high efficiency of a dust collector. Larger particles fall into the hopper. Smaller

particles collect on the filter bags. The compressed air reverse pulse jet cleaning system maintains a constant pressure drop setting across the filter bags.

Cleaning efficiency exceeds 99%. Dust filters are available with support stands or hanging brackets. Industrial Air dust filters are available in three (3) sizes.

MODEL	CAPACITY
IADF 1000	1,000 CFM
IADF 2000	2,000 CFM
IADF 3000	3,000 CFM
