

SLEEVE RECEIVERS

FILTERS FOR
HIGH VACUUM AND
LOW PRESSURE CENTRAL
COLLECTION SYSTEMS

Receivers are central components in fiber reclaim and waste collection high vacuum systems (**Hi-Vac**). These receivers can be utilized in low pressure systems (**Lo-Vac**) as well. By

forcing air through the unit in a cyclonic pattern, the wiping action reduces dust accumulation on the screen. The receiver is thoroughly cleaned by multiple internal compressed air rings.

FEATURES

Industrial Air sleeve receivers have **more than four times the screen area**, compared to typical flat screen receivers.

For easier and safer maintenance, the sleeve-type screen is **accessed from the top**. These receivers are manufactured

are manufactured from heavy-gauge carbon steel and have a **100 percent sealed cylinder-assembly dust cover**.
