

# LOUVERS

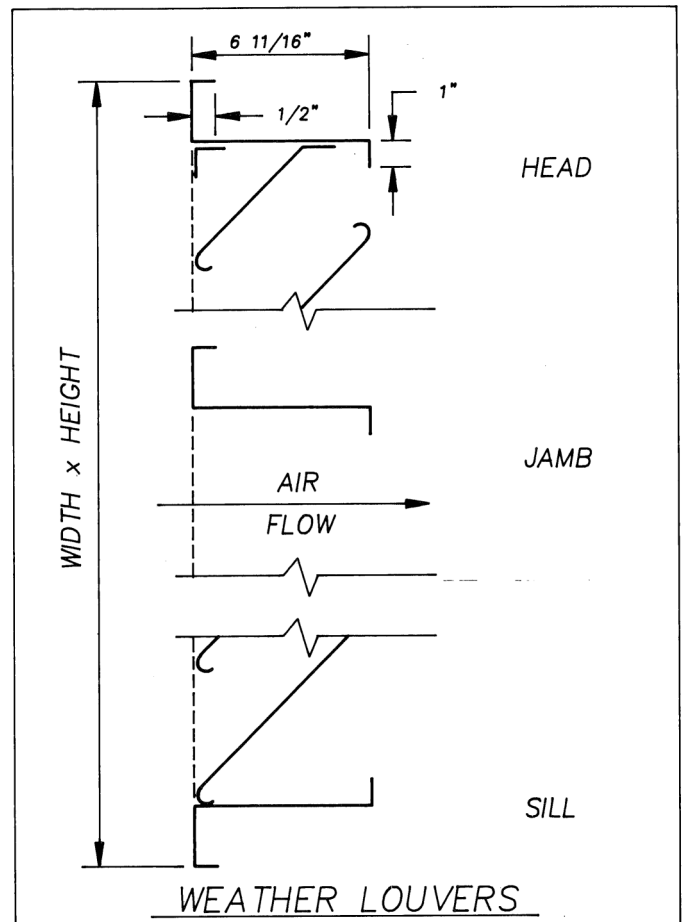

FOR INTAKE  
AND EXHAUST  
APPLICATIONS

Industrial Air standard weather louvers are die formed aluminum with removeable external expanded aluminum screens. The frame and screen are constructed of .050 aluminum. The blades are .032 aluminum

and riveted to the frame. They are available in any size up to 52" wide and 123" tall. They make an excellent companion with Industrial Air type "A" dampers for outside air and exhaust applications.

*Standard Weather Louver*

Alternate constructions are available, including galvanized metal, internal screen, louver frame extension to form a sleeve, and without flanges on one or more sides.
